

Marketplace Analytics

**Unlock revenue
growth, stronger
retention, and smarter
inventory decisions**

Turn marketplace data into clearer business decisions that improve performance and profitability.

Three analytics-driven opportunities identified to improve revenue growth, customer retention, and inventory performance.

Marketplace transaction analysis highlights the most important levers for commercial improvement.

94.5K

Top Revenue Driver

Units sold led by Clear PET Bottle 500ml

#1

Strongest Cross-Sell Opportunity

PET Bottle + Stand Pouch is the highest co-purchase pair

50%

Largest Growth Segment

Potential loyalists represent the clearest retention upside

80K

Inventory Control Threshold

Reorder point to protect against supply disruption

❏ **Executive takeaway:** Activate cross-sell offers, target potential loyalists with retention campaigns, and tighten reorder planning against the 80K threshold to grow revenue and reduce stock risk.

Business Problem & Project Objectives

Business Challenges

- **Revenue Leakage** — Cross-sell opportunities remain underutilized
- **Customer Prioritization Gap** — Marketing efforts are not aligned to customer value
- **Inventory Volatility** — Reactive replenishment drives stockout and overstock risk

Project Objectives

- Identify product affinities to grow basket size
- Decode buying behavior to sharpen commercial decisions
- Forecast demand to improve supply planning
- Strengthen inventory decisions to reduce stock risk

Business insights derived from integrated customer, product, and transaction data.

Strong Product Affinity Creates Immediate Cross-Selling Opportunity

Executive Takeaway

Customers repeatedly purchase PET Bottles and Stand Pouches together, creating a clear opportunity for bundle-based revenue growth.

Launch bundled offers and cross-sell campaigns immediately to capture incremental revenue.

Half of Customers Represent Untapped Growth Potential

Strategic Interpretation

Focus growth investment on the **50%** of customers already primed for expansion, and deploy immediate retention actions for the **33%** at risk.

The largest customer segment demonstrates strong expansion potential, while one-third of customers require proactive retention intervention.

Forecast-Based Planning Can Reduce Inventory Risk

56.5K

Forecasted demand

Plan for 56.5K units in the next cycle to align supply with expected pull.

62.3K

Safety stock

Hold 62.3K units as the buffer required to absorb demand volatility.

80K

Reorder point

Trigger procurement at 80K units to avoid stockouts and protect availability.

❏ Structured inventory thresholds provide a proactive framework for maintaining product availability and reducing operational risk.

Business value

Forecast-driven thresholds help maintain service levels, reduce stockout exposure, and support more confident planning.

Key insight

These inventory guardrails strengthen resilience by aligning replenishment decisions with business risk and customer availability.

Recommendation Matrix

Priority Area	Key Finding	Recommended Action	Potential Impact
Revenue Growth	Strong PET Bottle and Stand Pouch affinity signals room to expand revenue.	Bundle complementary products, launch cross-sell campaigns, and surface related items at checkout.	↑ Average Order Value through bundle offers
Customer Retention	50% of customers are classified as Potential Loyalists.	Introduce loyalty programs, personalize offers, and run win-back campaigns for At Risk customers.	↑ Customer Lifetime Value through retention campaigns
Inventory Planning	Forecast-driven inventory thresholds can be operationalized.	Replenish at the Reorder Point, maintain Safety Stock, and plan procurement with weekly forecasts.	↓ Inventory disruption through forecast-driven replenishment

Key Business Outcomes

Revenue Growth

Cross-selling opportunities identified through product affinity analysis

High-affinity product pairs reveal clear expansion paths to increase basket size and capture incremental revenue.

Customer Retention

50% of customers classified as a high-potential growth segment

A significant share of the base is ready for targeted activation, creating a strong runway for lifetime value expansion.

Operational Efficiency

Forecast-driven inventory thresholds established for proactive replenishment planning

Demand signals now support earlier replenishment decisions, reducing stockout exposure and improving service reliability.

By integrating customer analytics, product affinity analysis, and inventory forecasting, marketplace resellers can make more informed commercial and operational decisions that support sustainable growth.
